

The Scout Room.

A fan types their hometown. Snowflake builds them a personalized scout report from 150 years of MLB data. Every section is computed from gold tables Fivetran moved, dbt shaped, and Cortex narrated. No two reports are the same.

WHAT THE DEMO DOES

One input — a city and state — produces a five-section report: hometown heroes within 75 miles, a prospect persona for the inferred franchise, a hidden comp built on era-adjusted z-scores, a Did-You-Know panel with a US-state choropleth, and a closing paragraph generated by Cortex. Every chart carries a sentence that reads off its own numbers, not a template.

ARCHITECTURE IN ONE TABLE

LAYER	TECH	WHAT IT DOES HERE
SOURCES	Lahman · Statcast · MLB Stats API	150 years · pitch-level · live
INGESTION	Fivetran custom + HTTP connectors	Schedule, retry, schema drift
STORAGE	Apache Iceberg on S3	ACID, time travel, open format
TRANSFORM	dbt · bronze → silver → gold	10+ models, tests, docs
COMPUTE	Snowflake (federates Iceberg directly)	External volumes, no copies
AI SURFACE	Cortex EMBED · COSINE · SEARCH · COMPLETE · ANALYST	Vectors, comp, narrative, NL Q+A
VIEWER	Next.js 14 · static export	Bundled fixture, offline-safe

WHO THIS DEMO SERVES

AUDIENCE	WHAT THEY GET
BASEBALL FAN	A one-of-one scout report about their hometown and team
SALES ENGINEER	A working app that exercises every ODI layer in five minutes
DATA-PLATFORM BUYER	Iceberg as system of record, Snowflake as one of N compute engines
DATA ENGINEER	Source code for every panel — dbt models, Cortex SQL, scout engine in TypeScript
EXECUTIVE SPONSOR	One repo, a few hundred lines of dbt, a Next.js viewer that ships in a sprint

WHY ODI IS THE STORY

Open table format underneath (Iceberg on S3) means the prospect's data is portable. Snowflake is one of N engines that can query the same bytes. dbt promotes through three layers without ever exporting the lake. Cortex layers vectors, search, and an LLM on top of the warehouse the prospect already knows. What you see in this demo would have been a multi-quarter platform project a year ago. With ODI it ships in a sprint.
